

Medforval

Vision, Mission, Objectives and Activities

November 2019

Medforval is a network of forest landscape sites of high conservation value in the Mediterranean area. Its members are a community of practitioners and scientists representing selected sites across the region, contributing to the integrity and resilience of Mediterranean landscapes.

Vision

We want to see forest landscapes of high ecological value throughout the Mediterranean which are resilient, able to adapt to climate change and within which human activities are in harmony with nature.

Mission

To protect, manage and restore Mediterranean forest landscapes of high ecological value in the face of global change.

Objectives

Improve the ecological status of Mediterranean forest landscapes.

Build the capacity of practitioners and policy makers and encourage dialogue between forest-relevant stakeholders.

Influence policy processes in favour of resilient forest landscapes.

Increase people's support for forest landscapes.

Activities

Manage, protect and restore Mediterranean forest landscape sites through field projects.

Develop, exchange and share good practices and organize training to enhance knowledge of themes related to the sustainable use of forest resources.

Contribute to political debate when this has, or may have, implications for Mediterranean forest landscapes and ecosystems.

Raise public awareness and encourage a change in people's behaviour towards more sustainable use of forest resources.

Raise funds and create alliances to enable us to do the above.
